

GFCI (Ground Fault Circuit Interrupter) Maintenance Tips:

A GFCI outlet will cut off power in about 1/30th of a second before an electrical shock occurs. Test GFCI outlets every 1 to 3 months. They are located in the kitchen and bathroom where water can come in contact with a plug in electrical product.

Testing a GFCI outlet:

Press the RESET button on the outlet to prepare for the test.
Plug in a night light or lamp into the outlet and turn it on.
Press the TEST button. The light should go **out**.
Press the RESET button. The light should go **on**.

If the GFCI does not function properly it should be replaced. They are there for your safety.

**Maintenance Tips are provided by Action Property Management Residence Services as a value added free information service. For convenience and future reference the maintenance tips are also posted to the Buildinglink library. Serving you is our pleasure. We want you to enjoy the feeling of a well maintained home. You deserve it!*
