

EV Charging for the Future

Don't own an electric vehicle yet or plan on doing so for several years? This is still a great opportunity to take advantage of LADWP rebates to prepare your parking space for that future and increase the resale value of your unit. Once the charging station is in your parking space there will be no on-going cost to you until you have an electric vehicle to charge.

How It Works

1. Contact EverCharge
2. Complete registration and submit payment
3. Once 40 residents have signed up the project will move forward*
*if fewer than 40 residents commit, the HOA will discuss options including a full reimbursement to residents who signed up.

Costs

Installation + EV Charger = \$1,995* / space

1. Includes charge station, labor, materials, inspection & permits
2. After the first 40 residents sign up, pricing increases to \$3,700 per space for this project. If installed at a later date pricing will be quoted individually, averaging \$3,750-4,750.
3. *Pricing applies for spaces with a wall or column adjacent. If no wall or column is available, additional costs may apply.

Monthly: \$15/month + Usage

1. Member monthly rates cover \$1M insurance, 24/7 support, on-site maintenance, software upgrades, repairs and billing services.
2. Usage rates are TBD since a new service is being put in for this project. Final rates are expected to be between \$1.40-1.80 per hour of active charge based on the assigned utility rate.
